

Alternate Method of Removing Drain Plugs

On Allied Air equipment that utilizes drain plugs such as air handlers, 90% plus furnaces and coils; there is a slot in the plug that is made for a wide blade straight screw driver to be inserted to remove the drain plug.

Another method is to use a ½ drive extension, insert it in the drain plug to remove drain plug. This method should be used if the correct screw drive is not available.

If you have any questions, please contact Allied Technical Service at 800-515-3501.
